Double Patenting

Claims 4, 5 and 7-17 are rejected under the judicially created doctrine of double patenting over claims 1-16 of U. S. Patent No. 6,896,712 B2 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

The subject matter claimed in the instant application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming common subject matter, as follows: A work chamber with an air inlet and a contaminated air discharge opening, a fan enclosure, a conduit with a makeup air inlet extending from the contaminated air discharge opening to the fan enclosure, a first HEPA filter downstream of the contaminated air outlet and air inlet and upstream of the fan enclosure, and a fan within the fan enclosure to draw air through the conduit from the contaminated air outlet and makeup air inlet through the first HEPA filter into the fan enclosure.

Furthermore, there is no apparent reason why applicant was prevented from presenting claims corresponding to those of the instant application during prosecution of the application which matured into a patent. See MPEP § 804.
